

Assignment title: Microsoft Azure – L3 – Analysing VM with Log Analytics.

Solution:

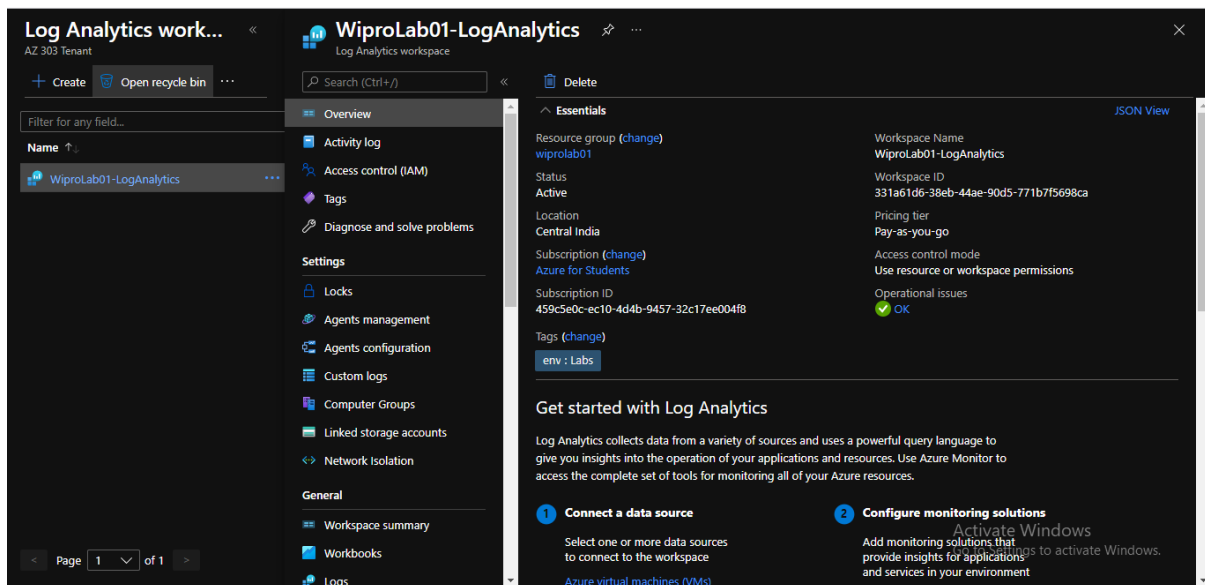

Please note that View designer is deprecating and now replaced with workbook Hence, activity done using workbook.

Description: Analyzing VM with Log Analytics.

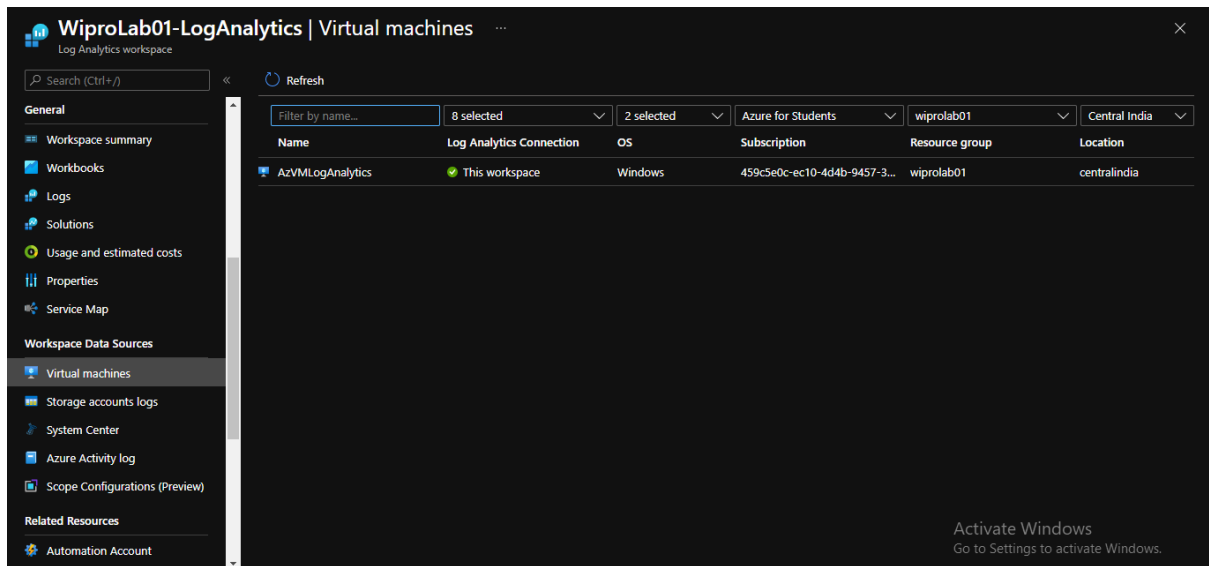

1. Create a VM with Window OS, with normal configuration.

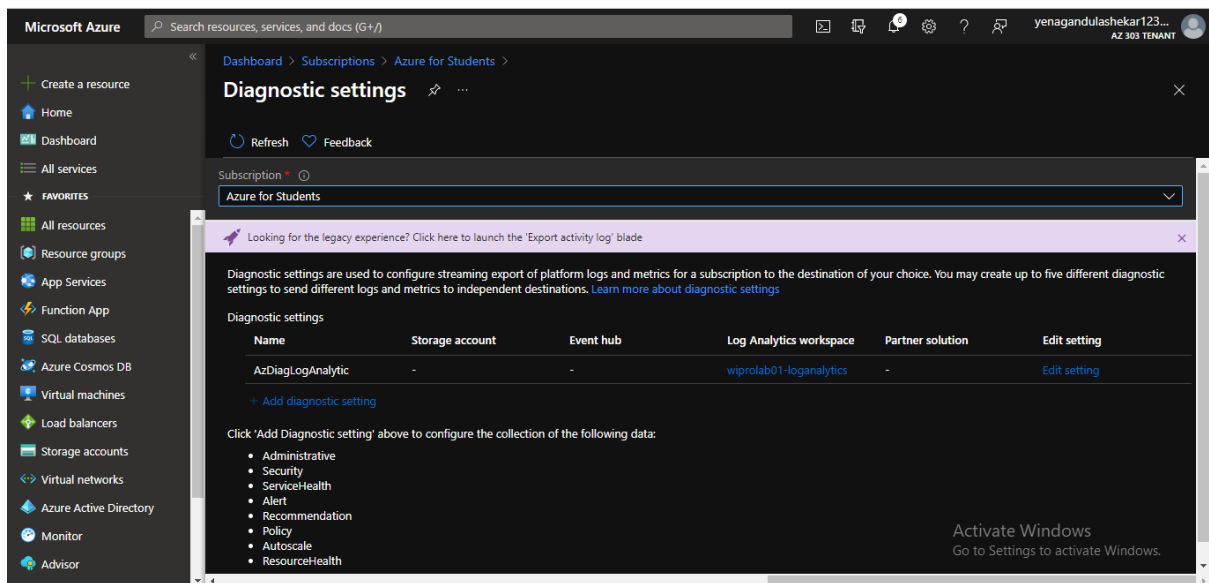

2. Create Log Analytics workspace.

3. Select the “Workspace Data Sources” as Virtual Machine.

- Select the Subscription
- Configure the “Activity log” to capture the data generated by “Windows Event Log”

- Query the Logs to check the “Heartbeat” of the VM.
Heartbeat | where Computer == 'AzVMLogAnalytic'
- Preparing dashboard using View designer
